

PRODUCT BROCHURE

#1 Industrial Doors, Loading Dock Equipment, Impact Doors & Strip Curtains

maxiflex®

Our PVC material
is recyclable

STRIP CURTAINS

Area separation and temperature control

Transparent strips formulated from a PVC compound designed to combine high clarity with mechanical strength due to an outstanding degree of flexibility.

Available in flat or ribbed material, various widths and thicknesses. The strips are mounted to specially designed mounting brackets.

Our experienced sales team will be able to advise which strip material will be best suited for your specific application.

Advantages:

- Energy saving
- Eliminates draughts
- Insect, bird, rodent and dust barrier
- Noise reduction

Applications:

- Cold/freezer room doors
- Factory entrances
- Conveyor openings
- Factory partitioning
- Spray booths

WELDING SCREENS

Protects personnel from sparks, splashes and welding flash. Formulated from a red/green PVC that removes 99.9% UV in welding applications to ensure optical safety to people not directly involved in operation. Excellent two-way vision through the near transparent strips allows for maximum visibility needed for safety and supervisory reasons. Available as fully assembled or kit-form 2m wide x 2m high screen with or without wheels and red/green strips or yellow sheets

Applications:

- Welding safety screen
- Noise reduction
- Grinding screen
- Wind barrier

European standard EN 1598
International standard ISO 25980

PVC SHEETING

Thickness of sheeting:

- 1mm
- 2mm
- 3mm
- 5mm
- 7mm

Width of sheeting:

- 1m
- 1.2m
- 1.5m

Applications:

- Industrial flexible doors
- Factory partitions
- Warehouse partitions
- Protection screens
- Machine covers and protectors

Ease of access for high traffic areas

Impact doors open with a gentle push and have a self-closing mechanism.

Advantages: Improve workplace environment by preventing draughts and allows safe, damage free passage for personnel and equipment.

Applications: retail stores, restaurants, pharmacies, convenience stores, processing plants and factories.

IMPACT DOORS

NEW & IMPROVED!

Atmodoor® 2.0

Ideal for privacy into restricted areas.

The impact door with double swing action to 90° for pushcart and pedestrian traffic.

The new and improved Atmodoor 2.0 is the ideal door for privacy into restricted areas.

With double swing action to 90° it can be used for pushcarts or pedestrian traffic.

Duralite

Heavy duty and Insulated for heavy traffic areas.

Good for all pedestrian, cart or motorised man-ridden traffic in dry storage, refrigerated or washdown environments.

NEW & IMPROVED!

Swingflex® 2.0

Medium-duty doors with a 7mm thick, clear, flexible PVC door panel.

Perfect for where traffic flow is of utmost importance while maintaining visibility.

LEADER IN AFRICA SINCE 1993

ASSA ABLOY

HIGH SPEED DOORS

Doors with rigid curtains - increase security and minimize energy loss in high cycle applications

Doors with flexible curtains - partition rooms for temperature control, noise protection, air filtration and energy loss prevention

Special application doors - for clean rooms and the food industry

Doors for process applications - protect people, product and processes. Operating in close proximity to machinery.

Improve efficiency, safety and hygiene

Guarantee the smooth flow of materials, reduce energy costs and ensure a constant room temperature. ASSA ABLOY high speed doors can improve efficiency, safety and hygiene in applications with frequent openings and closings including manufacturing, cold storage and cleanrooms. There are various curtain configurations available for internal or external use and extra options like the self-repairing system and soft bottom profile.

Benefits: low maintenance, insulation, energy saving, crash system, speed, safety, service and reliability.

ASSA ABLOY

SECTIONAL DOORS

Overhead sectional doors are a durable, tight-sealing fit for industrial use. Attractive and easy to operate.

Insulated Panel Sectional Doors

An overhead sectional door designed to be used in applications like warehouses, docking bays and factory entrances. The design is optimal for customers who need robust, well-insulated and space-saving doors in the outer walls of industrial premises.

A high quality, 42mm thick, sandwich panel provides good insulation values and corrosion protection. There is an 82mm sandwich panel available for when higher insulation is required as in cold storage facilities.

Upgrade in specification for ripening rooms available.

Glazed Sectional Doors

The most versatile glazed overhead sectional door, designed to be used when there is a need for light, exposure or vision. Typical applications are showrooms, fire stations or any application where optimal daylight inlet or exposure are desirable.

The aluminium frames of the glazed overhead sectional doors are anodized or painted. The doors can be fully glazed or delivered with micro-filled bottom panel, which gives the doors a modern, attractive and unique appearance.

- Doors can be manually or electrically operated
- All manual doors can be upgraded with operators and automation
- Various track systems available
- Various glazing options available
- Optional pass door available

LOADING DOCK EQUIPMENT

MAXIDOCK AP

Air powered dock leveller

Standard features:

- Reinforced base frame
- 16mm thick bent lip prevents material handling equipment from 'grounding out' and avoids tripping hazards
- Swing lip with open hinges prevents rust build-up and requires no lubrication, making it very easy to maintain
- Plated shafts and pins prevent rust
- Very robust swing lip support with safety tread
- Three hinges on rear deck for added strength
- 8 or 10 deck support beams for added strength, depending on width of dock leveller
- Steel toe guards which slide inside the unit

Specifications:

Capacity	10 000kg static load
Working Range	Above deck: 320mm Below deck: 200mm
Lip length	400mm
Power supply	220 volt - 1 phase
Power pack	Airbag with fan motor
Controls	Single push button control

Model:	Length:	Width:	Height:
MaxiDock AP610	2835mm	1830mm	500mm
Maxidock AP710	2835mm	2130mm	500mm
Maxidock AP712	3420mm	2130mm	500mm

MAXIDOCK HP

Hydraulic dock leveller

Standard features:

- Reinforced base frame
- 16mm thick bent lip prevents material handling equipment from 'grounding out' and avoids tripping hazards
- Swing lip with open hinges prevents rust build-up and requires no lubrication, making it very easy to maintain
- Plated shafts and pins prevent rust
- Very robust swing lip support with safety tread
- Three hinges on rear deck for added strength
- 8 or 10 deck support beams for added strength, depending on width of dock leveller
- Steel toe guards which slide inside the unit

Specifications:

Capacity	10 000kg static load
Working Range	Above deck: 320mm Below deck: 200mm
Lip length	400mm
Recommended dock height	1350mm
Power supply	380 volt - 3 phase
Power pack	Hydraulic

Model:	Length:	Width:	Height:
MaxiDock HP610	2835mm	1830mm	500mm
Maxidock HP710	2835mm	2130mm	500mm

Warranty: 2 year structural, 1 year hydraulics, 1 year remaining parts. Terms and conditions apply.

DOCKING ACCESSORIES

Docking lights

Traffic lights - Establish a clear line of communication between drivers and dock personnel. Reduces the potential of serious accidents from truck drivers pulling away before loading/unloading is finished.

◁ Dock-in Lights - Parking guide and traffic light in one system.

Δ LED Dock light - Unique, energy efficient dock light with a robust design and long term lifetime.

Bumpers

Provide maximum protection against vehicle damage to the building, dock leveller, restraint, seal or shelter. Maxiflex offers a complete line of dock bumpers to help protect your building and loading dock equipment.

◁ D-type dock bumpers, removable bumpers

Δ Laminated bumper (small, medium and large)

Bollards

Protection for loading docks, door posts and other in-plant areas susceptible to a moving vehicle collision. Available in galvanised steel or powder coated.

Truck guides

Heavy duty wheel guides direct the truck into the correct position for efficient loading or unloading. Available in galvanised steel or powder coated.

Cushion seals

Dock cushion seals are heavy duty foam pads that are fitted around the outside of a door opening to make a seal around the back of a vehicle when loading or unloading.

Dock shelters

The dock shelter is the solution for improved energy-savings and working conditions. The shelter seals off the vehicle, giving weather protection during loading and unloading process. The dock shelter provides improved working conditions and reduces the draught into the building.

TECKENTRUP
DOOR SOLUTIONS

FIRE PROTECTION DOORS

Maximum protection with functional and aesthetic design

- Reinforced base frame
- Superior fire protection - tested for integrity, insulation and heat radiation
- Full steel construction

- Flush door leaf with less protruding edges
- Ironmongery included
- Locally available

European standard

Fire resistant

Smoke-proof

Sound-insulating

Burglary-resistant

THERMOTECK ROLLER DOORS

Our double-walled, insulated ThermoTeck roller shutter consists of coated steel profiles. It is equipped with a top seal and a primed winding shaft as well as a direct-mount drive with 400 V of three-phase voltage. The simple, robust and flexible design featuring a roller curtain which winds up very tightly, is suitable for use in a wide range of applications, whether as an outside roller shutter or installed inside.

- Galvanised and heat-insulating
- Special profile
- Lightweight steel design
- Smooth and reliable operation
- No lubrication required!
- A mullion can be added for extremely wide door opening like hangar doors

ASSA ABLOY

HEAVY INDUSTRY DOORS

Big doors for big fleet

Suitable for extreme sizes and tough conditions. Vertical lifting fabric doors are best suited for extreme sizes and extremely tough conditions and our high speed rubber doors are best suited for high cycle and extremely tough conditions.

Hangar doors

Particularly suitable for aircraft hangars as well as for shipyard facilities in rough seaside environments. Due to the unique design and structure the hangar door is extremely wind-resistant.

Rubber doors

The rubber door redefines tough and rugged with an unobtrusive, low-headroom design, thin, low-profile side frames and the proven strength to withstand wind pressure up to 140km/h. This classic high-speed door is equipped with the coveted self-repairing, break-away feature.

Applications: Mining industry, aviation, ship yards, waste management, manufacturing, transportation and distribution facilities, truck shops, was bays and maintenance facilities.

Tried and tested safety & reliability
Since 1906

UNDERGROUND VENTILATION MINE DOORS

- Patented design - withstands highest pressures
- Remains closed when air currents are reversed
- Fast open and close cycle = little idle time improves productivity
- Customised to specific needs
